
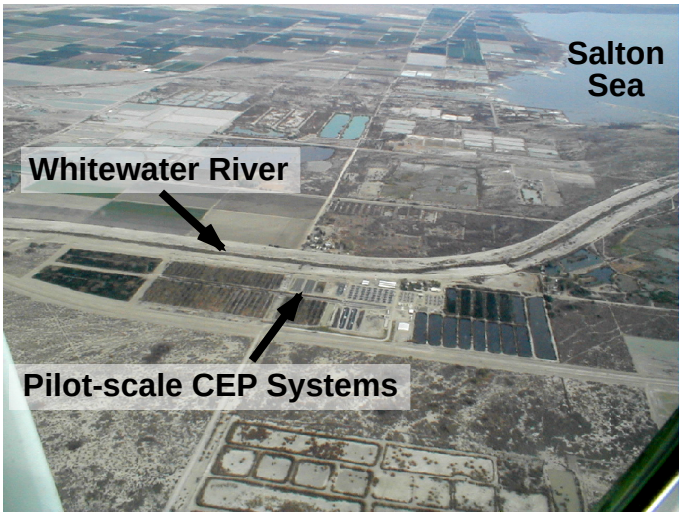

Photograph 1. Aerial view of Kent SeaTech facilities showing pilot-scale Controlled Eutrophication Process (CEP) units and proximity of Whitewater River.

Photograph 2. Overview of two pilot-scale Controlled Eutrophi - cation Process (CEP) systems constructed by Kent SeaTech adjacent to Whitewater River (in background).

Photograph 3. The pilot-scale Controlled Eutrophication Pro - cess units were modified by Kent SeaTech for use in studies of phosphorus and nitrogen removal.

Photograph 4. Dense algal populations develop rapidly in the Algal Treatment Zone of the pilot-scale CEP systems.

Photograph 5. The concrete Fish Zones of the CEP units were modified by Kent SeaTech for the Salton Sea project.

Photograph 6. Additional concrete partition walls were added to the CEP units to form the Primary and Secondary Fish Zones.
